

The Learning Journey

Before		After
	What is Geography	
	Use grid references to explore Victoria Falls	
	What is the relief of Mount St Helens?	
	To explore the distance a penguin travels in Antarctica	
	How to measure rivers	
	Analysing the Great Barrier Reef	
	Map Skill revision	

Misconceptions

Reading Grid References

When giving a four-figure grid reference, you should always give the eastings number first and the northings number second, very much like when giving the reading of a graph in school, where you give the x coordinate first followed by the y.

An easy way to remember this is that to get the first number, you go along the corridor (horizontal, x axis, eastings) and then up the stairs (vertical, y axis, northings).

Measuring distances

Always remember to convert the distance in cm/mm into metres/kms. The scale line will help you do this.

Speak like a geographer
